

DNS Setup Instructions

southernreignbaseball.com → GitHub Pages

Step 1 — Log into GoDaddy

1. Go to godaddy.com and sign in.
2. Click your name (top right) → **My Products**.
3. Find **southernreignbaseball.com** and click **DNS**.

Step 2 — Remove existing A records

Delete any existing **A records** where the Name is **@**. GoDaddy adds default ones that need to be removed first.

Step 3 — Add 4 new A records

Click **Add New Record** and add each of the following:

Type	Name	Value	TTL
A	@	185.199.108.153	600
A	@	185.199.109.153	600
A	@	185.199.110.153	600
A	@	185.199.111.153	600

Step 4 — Add a CNAME record

Add one more record for the **www** version of the domain:

Type	Name	Value	TTL
CNAME	www	nvastano.github.io	1 Hour

Step 5 — Save and confirm

Save all changes in GoDaddy. DNS can take up to **1 hour** to propagate.

Once done, go to github.com/nvastano/southern-reign/settings/pages and click **Check again**.

When it turns green, check the **Enforce HTTPS** box.
